

## Fair Fruit Logistica Berlin 05-07 April 2022

Due to the cancellation of the trade fair due to the Corona Pandemic, Fruit Logistica took place again. The number of visitors has not yet reached the peak values of previous years, but the visitors were happy that measuring is possible again and were very interested in new technologies.

We noticed this particularly at the stand of our partner TOMRA Sorting Solutions, where the **newly developed TOMRA 5C sorting machine** was presented live at a trade fair for the first time.

**TOMRA 5C** is a premium optical free fall sorter for bulk products. TOMRA 5C's advanced system and industry-leading sensors increase efficiency, safety and yield. This easy-to-use machine is designed to grow with your needs while handling twice the capacity. We were connected to our demonstration department at the trade fair via an online stream, so that interested customers could be shown the machine live with the product.
