

## New TOMRA 5C sorting machine a bestseller!

Thelen-machine is the contact person for all German customers of TOMRA who process food industrially. Here the focus is on salat, vegetables and potatoes.

The new TOMRA 5C optical sorting machine has been very well received in the market, which we are of course pleased about.

### Advantages:

- ✓ More light, less shadowing, less calibration
- ✓ Detects the smallest defects from 1x1 mm
- ✓ Detection of the finest colour deviations
- ✓ Nearly 360° all-round view.
- ✓ Intuitive user interface: "TOMRA ACT" Simple graphical setting and operation

### Advantages of the EDHEG version:

- ✓ All surfaces are sloped - dirt is always washed away - no water remains, which leads to limescale deposits etc.
- ✓ No cable ducts where product is left lying. All cables are installed in the frame but accessible via inspection and maintenance openings.
- ✓ Control cabinets and all doors with seals right on the edge, which means it is no longer possible for product or dirt to be washed under the door edges during cleaning.
